Thu, 03/31/2005 (All day)

The MONBCHJOB command presented in the previous installment of this column unfortunately had a problem in the main command-processing program, CBX1322. In line 415.00, I had entered the following:

```
DoW LstInf.LstSts  '2' Or LstInf.RcdNbrTot > RtnRcdNbr;
```

This needs to be changed to the following:

```
DoW LstInf.LstSts  '2' Or LstInf.RcdNbrTot >= RtnRcdNbr;
```

The equal sign was missing in the original statement, which lead to the last record in the job list not being read. As a consequence, a monitor event could remain undiscovered.

A corrected version of the code has been posted at the following link:

<http://iseries.pentontech.com/t?ctl=6774:103C2>

I apologize for any inconvenience caused by the above error.
