Preventing Immediate Deletion of Journal Receivers

[System iNetwork Systems Management Newsletter](#)

Chuck Lundgren

Wed, 04/28/2004 (All day)

This issue's utility by Carsten Flensburg is journal receiver exit program CBX912. CBX912 is designed to protect specified journal receivers from accidental deletion by making them available online for at least a week after they are detached. When a program runs the DLTJRNRCV for a journal receiver protected by CBX912, CBX912 prevents its deletion and issues diagnostic message CPF70ED, followed by escape message CPF2117, to the calling program.

Instructions for compiling and installing exit program CBX912 are included with the source code, which you can obtain here:

<http://www2.systeminetwork.com/noderesources/code/clubtechcode/DltJrnRcvExit.zip>

The above utility was written by Carsten Flensburg. For questions regarding this tip, contact Carsten at <mailto:flensburg@novasol.dk>.
