Utility RnmHdwRsc: Quickly Rename Hardware Resources Without SST

[System iNetwork Systems Management Newsletter](#)

Chuck Lundgren

Wed, 06/09/2004 (All day)

This issue's utility by Carsten Flensburg is Rename Hardware Resource (RnmHdwRsc), which offers a simple way of renaming hardware resource names without using the system service tools (SST). Renaming hardware resources can be useful when the names generated during the auto-configuration of hardware leave something to be desired. You can view the current hardware resources with the Display Hardware Resources (DSPHDWRSC) or Work with Hardware Resources (WRKHDWRSC) commands.

The utility consists of command CBX915X, CL program CBX915, and panel group CBX915X. Note that special authority *ALLOBJ or object authority *USE for system API QRZCHGE is required to run this command.

Instructions for compiling RnmHdwRsc are included with the source code, which you can obtain here: <http://www2.systeminetwork.com/noderesources/code/clubtechcode/RnmHdwRsc.zip>

The above utility was written by Carsten Flensburg. For questions regarding this tip, contact Carsten at <mailto:flensburg@novasol.dk>.
